

Potential Invited Speakers

The IFI has funds for [invited speakers](#). Let's collect names of potential speakers we might ask the IFI to invite! Please add your own suggestions, and comment, vote, etc. by editing the respective bulleted lists.

My initial list is somewhat biased towards geographically-close people, for no particular reason other than that they are very likely to accept an invitation. All of Europe should be ok, perhaps beyond.

[Nicu Sebe](#)

- computer vision, interaction, machine learning
- *Justus*: I would like to invite him soon, but we may do this through the BIT (Bolzano-Innsbruck-Trient) cooperation.

[Ales Leonardis](#)

- visual learning
- *Justus*: He has very interesting things to say, and I hope to start a collaboration at some point.

[Horst Bischof](#)

- computer vision, adaptive methods

[Christoph Lampert](#)

- computer vision, machine learning, structured-output learning, kernel methods

[Tamim Asfour](#)

- humanoid robotics

[Markus Vincze](#)

- computer vision for robotics

[Peter Auer](#)

- machine learning, computer vision

[Jan Peters](#)

- robot learning, reinforcement learning

Hi, I think Ales Leonardis, Horst Bischof, Christoph Lampert and Tamin Asfour would be pretty good talks. I may add:

[John K. Tsotsos](#)

- computer vision, computational biology,
- *Antonio*: He is my PhD supervisor and one of the big names in computer vision.
