Intelligent and Interactive Systems

Making robots learn to perceive and act with understanding

At IIS we enable autonomous robots to perceive and act flexibly and robustly in unstructured environments, leveraging machine learning methods to build perceptual, motor and reasoning skills.

We seek to answer the question: *How can we enable robots to acquire the knowledge and understanding they require to interact sensibly with unstructured environments?*

Our research addresses complete perception-action loops, from computer vision to grasping and manipulation, using reactive algorithms and/or cognitive models. Much of our work uses machine learning to enable robots to synthesize and improve complex and robust sensorimotor behavior with experience. Related areas of interest include human-robot interaction, image and video analysis, and visual neuroscience.

Working With Us

We have multiple open positions for doctoral students and postdocs.

Check our thesis topics for Bachelor and Master students.

News

- Justus Piater is an **invited speaker** at the workshop on Machine Learning Methods for High-Level Cognitive Capabilities in Robotics at IROS in October 2016.
- Justus Piater is an **invited speaker** at the NII Shonan Meeting on Cognitive Development and Symbol Emergence in Humans and Robots in October 2016, in Japan.
- Justus Piater is an **invited speaker** at the workshop on Robotics in the 21st century: Challenges and Promises in September 2016.
- Justus Piater is an **invited Speaker** at the international conference on Agency and (Quantum) Physics in September 2016.
- Emre Ugur is an **invited speakers** at the workshop on Bootstrapping Manipulation Skills at RSS in June 2016.
- Emre Ugur is co-organizing **Shonan Meeting** on Cognitive Development and Symbol Emergence in Humans and Robots, with Tadahiro Taniguchi and George Konidaris, in October 2016, in Japan.
- Emre Ugur is an **invited speaker** at the 2nd International Workshop on Cognitive Neuroscience Robotics in February 2016, in Osaka, Japan.
